

DoorBird Connect Module Manual

About:

DoorBird is a state-of-the-art door station that allows you to monitor and control your entry points in a home or business. With a DoorBird Door Station and Wireless Internet Network, security couldn't get any easier. Pair DoorBird with Compass Control and now you have a smart automation system at your fingertips.

Control:

Compass Control module provides:

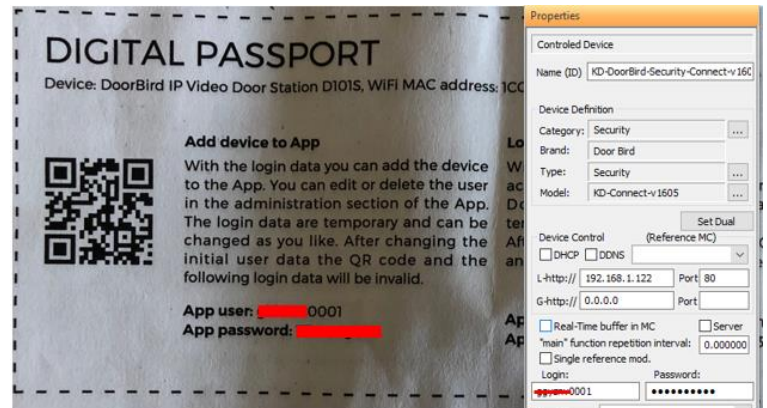

- Live Video Feed
- View of History images
- Light On Control
- Door Open Control

Setup Communication:

There are two cases involving login with DoorBird:

If DoorBird is configured with a login/password:

- Collect the App User and App Password info from your DoorBird Digital Passport
 - The App User is six letters followed by "0001"
 - The App Password is 10 alpha-numerical characters
- In Compass Navigator, click on the DoorBird IP Device and enter the login info into the device properties tab.
 - Insert the username under Login
 - Insert the password under Password

If DoorBird is not configured with any login/password.

No further information needs to be added. Confirm that the login and password fields for the device properties are left blank. *Do not enter any characters into those fields*

Setup Communication:

Upload and update project for use
